

Standalone 3D Interactive Stress viewer

Analysis Stress Viewer (Summary)

The Analysis Stress Viewer is designed to provide instant and accessible visualization of your structural analysis results.

Zero-Installation Interactive Viewing

The viewer requires **zero software installation**. Simply open the self-contained `Prepromax_interactive_stress_plot.html` file in any web browser to view all node points and their maximum/minimum values **interactively in 3D**.

Cloud Accessibility:

No local Python installation is necessary. The core process was prepared using <https://colab.research.google.com> (Google Colab), ensuring maximum accessibility.

Simplicity:

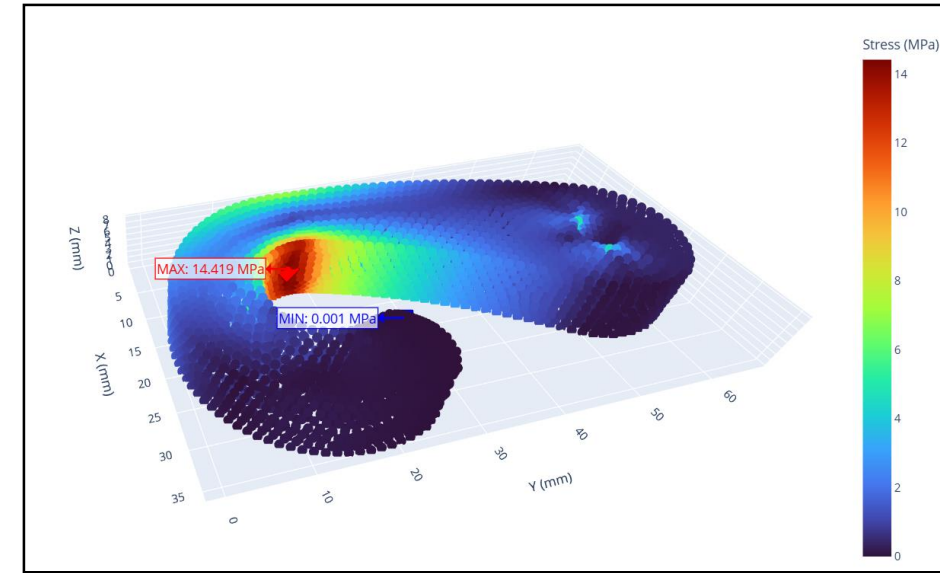

The entire solution is powered by a **single Python script** with no supplementary files required.

Data Management

Furthermore, the viewer facilitates data handling:

The export option is available to obtain raw analysis data in **x,y,z,von-mises** format using the **Export CSV** button.

Build Your Own Analysis Viewer. The code is fully provided as an open-source resource. **You can find the complete Python source code file attached.**

Open <https://colab.research.google.com/> in a web browser.”

The screenshot shows the Google Colab web interface. The address bar at the top displays <https://colab.research.google.com/>. A blue arrow labeled '1' points to the address bar. The main content area shows the 'Welcome To Colab' page with a sidebar on the left containing a 'Table of contents' and a '+ Section' button. A modal dialog box titled 'Open notebook' is open in the center. The dialog has a left sidebar with options: 'Examples', 'Recent' (highlighted with a blue border), 'Google Drive', 'GitHub', and 'Upload'. The main area of the dialog contains a search bar labeled 'Search notebooks' and a table of notebooks. The table has columns for 'Title', 'Last opened', and 'First opened'. A single notebook is listed: 'Welcome To Colab' with a timestamp of '8:49 PM'. At the bottom of the dialog, there is a blue button labeled '+ New notebook' and a 'Cancel' button. A blue arrow labeled '2' points to the '+ New notebook' button.

| Title | Last opened | First opened |
|------------------|-------------|--------------|
| Welcome To Colab | 8:49 PM | 8:49 PM |

FINISH

Disk 69.60 GB available

```
... --- Starting: Reading data from 'Analysis-1.csv' ---
Loaded 6266 data rows.
Max Stress: 14.419 MPa at (10.14, 16.49, 4.32)
Min Stress: 0.001 MPa at (24.37, 24.29, 7.56)

===== PROCESS COMPLETED SUCCESSFULLY =====
Total Node Count      : 6266 points
Maximum Stress Value   : 14.419 MPa
Minimum Stress Value   : 0.001 MPa
Output HTML File       : Promomax_interactive_stress_plot.html
HTML file generated successfully with Max/Min annotations and CSV export button.
```

“After the program is executed, a summary will appear in the last lines. In the left menu, a file named ‘Promomax_interactive_stress_plot.html’ will be generated as the 3D viewer. This file is standalone, can be moved or emailed on its own. You can download it by clicking the ... button next to it. Note: Since all XYZ coordinates and stress values—including the ‘Node’ entries—are embedded inside, the file size may grow depending on the number of nodes in the analysis.”

Variables Terminal

9:12 PM Python 3

By opening the **Prepromax_interactive_stress_plot.html** file in a web browser, you will be able to view all node points and their maximum and minimum values **interactively** in **3D**.

Furthermore, you can export a file in **x,y,z,stress** format using the **Export CSV** button.
